

## D-Link Unified Services Router

### All the services you need for your small and medium business office network can now be found in a box!

Creating an office network has once been about purchasing many different devices to provide different services and functionalities in order to connect online to the Internet. Now, with D-Link Unified Services Router (DSR) series, you can conveniently combine a number of these useful services in one device to get all the functionalities you need for comprehensive management, superior wireless performance, robust security, and flexible deployment capabilities for your network. This all-in-one full-featured solution is ideal for any growing network environment, and especially for those that are or may be utilizing cloud applications or telecommuting for business operations.

With the growing needs of businesses today, efficiency and reliability top the list of needs for any business network. D-Link DSR series offers redundancy through connectivity to more than one Internet Service Provider (ISP) to help businesses maintain and manage data traffic to ensure that data is not lost during transfer even when a landline connection is unavailable. Its wireless compatibility to 802.11n allows users to experience high speed wireless data rates with minimal 'dead spots' or spots where there no or hardly any signal is found throughout coverage areas.

The DSR series comes with robust Virtual Private Network (VPN) capabilities that allow you to securely communicate with employees even when you are away from the office. By establishing a VPN connection, business assets in this way can be safely shared and accessed over the Internet, allowing employees and other office branches the flexibility of remote and mobile access.

As office networks continue to accumulate more devices to fulfill different needs, many business networks are fast becoming more sophisticated and difficult to manage. D-Link DSR series combines all the essential services and functions usually provided through multiple devices into one device to eliminate unnecessary complexity to your network.

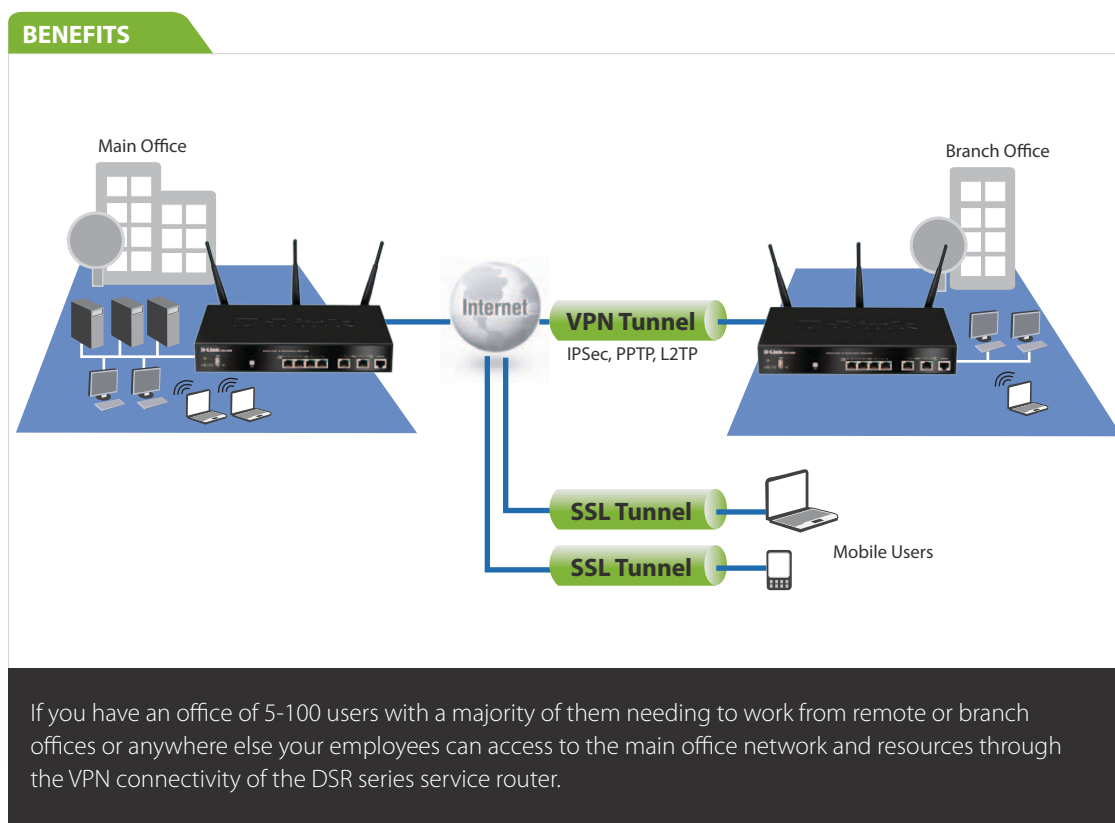

## D-LINK UNIFIED SERVICES ROUTER DSR OFFERS:

- Single device management of different services for securing Internet access.
- Two to three connections to Internet service providers to automatically manage bandwidth or line availability when failover is required.
- Employees to safely connect to company resources from any location at any time.
- Employees to access office shared resources via high-speed wired or wireless network.

## HOW CAN D-LINK DSR SERVICE ROUTER BENEFIT YOU?

### Virtual Private Network Connectivity

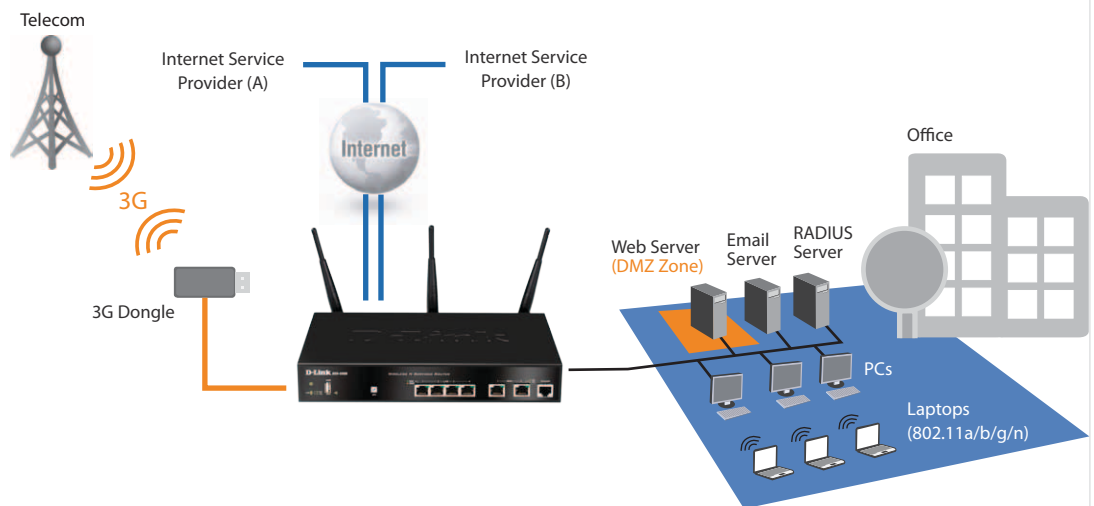

- Up to 20 employees concurrently using the web browser to access office resource through Secure Sockets Layer (SSL) VPN tunnels.
- Up to 70 concurrent site-to-site VPN tunnels using IP Security protocol (IPSec), Point-to-point tunneling protocol (PPTP) or layer 2 tunneling protocol (L2TP) to facilitate branch office connectivity through encrypted virtual links.

### Bandwidth (Internet Traffic) Management

- Dual-WAN Gigabit Ethernet ports which ensure maximum productivity for your business operations.
- Automatic failover to maintain data traffic without disruption when a landline is lost.
- Outbound load balancing which adjusts outgoing traffic across two WAN interfaces to provide high availability and performance of your network.
- Automatic switching to 3G network whenever the wired Internet line/connection is lost.
- Second WAN port configuration as DMZ port to isolate servers from your LAN.

## BENEFITS

If you are running an e-commerce business and cannot afford to have any lost Internet connection, you can engage two Internet service providers and use the dual-WAN ports and 3G redundant features of the DSR series service router to provide seamless Internet redundancy. You can also set your e-commerce server in the DMZ zone with dedicate service provider line, if required, to ensure sufficient bandwidth for your customers.

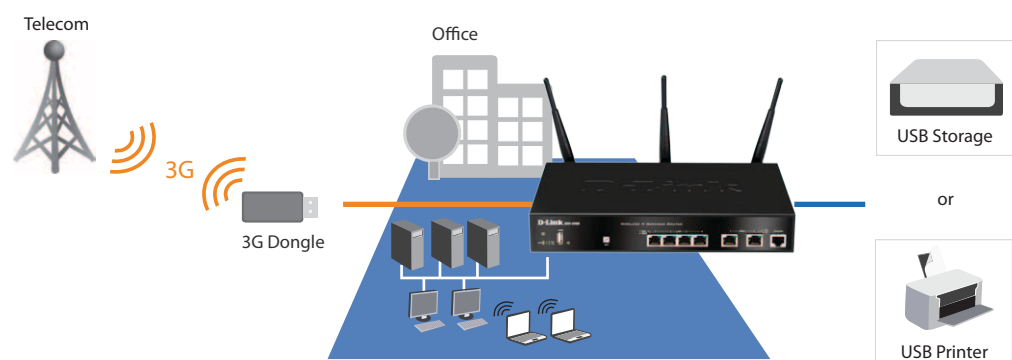

### High Speed Wireless Performance

- Award-winning 2x3 Multiple Input Multiple Output (MIMO) technology provides high data rates and minimal 'dead spots' by enhancing wireless coverage.
- 802.11n compatible, allowing for operation in either 2.4GHz or 5.0GHz radio bands.
- 802.11n access point embedded in the device to allow mobility within the office.

### Flexible Deployment Options

- Four Gigabit port embedded in Ethernet switch which provides up to four computers or devices network access.
- Sharing of printer or data storage device across your network using D-Link SharePort USB.

## BENEFITS

You can share your USB devices like storage or printer easily without the need of configuration.

## D-LINK GREEN TECHNOLOGY

- D-Link Green WLAN scheduler, which reduces wireless power by automatically turning off power during off peak hours.
- D-Link Green Ethernet which adjusts power usage based on the detected cable length.

## UNLEASH YOUR BUSINESS POTENTIALS

With the increasing importance of Internet connectivity, D-Link Unified Services Router provides you with the technology and ease of use to meet today's and tomorrow's growth at an affordable price.
